Suggestions for Proper Injection of Animal Drugs

- The only acceptable injection site on a pig is in the neck. (YPQA+ and PQA+)
- Properly restrain the animal before giving an injection.
- Give injections according to label instructions. Subcutaneous (SQ) means under the skin; intramuscular (IM) means in the muscles; intravenous (IV) means into the blood. (These are some routes of administration.) ****It is highly recommended that only a licensed veterinarian or other trained personnel should give IV injections.**
- When the label directions permit, give injections under the skin so that the muscle tissue is not injured.
- Use sterilized needles and syringes. Keep the bottle cap clean.
- Do not transfer needles back and forth from animal to bottle because you may transfer bacteria from the animal's skin back into the bottle.
